PROFESSIONAL SUMMARY

Full Stack Developer with 2+ years of experience building fast, scalable web applications for SaaS and e-commerce with React.js, Next.js, Node.js, Express.js and MongoDB. At Deutics Global, owned 20+ production React components, integrated 15+ REST APIs with RTK Query and TanStack Query, and cut unnecessary re-renders by about 40%. Shipped four full-stack products end to end: a Stripe-enabled grocery delivery platform, a MERN e-commerce store with real-time admin chat, an embeddable multi-tenant AI support chatbot, and a bilingual wedding invitation platform. Seeking a Full Stack or Frontend Developer role (React.js, Next.js, Node.js).

TECHNICAL SKILLS

Frontend: React.js, Next.js (App Router, SSR/SSG), JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Framer Motion, Responsive Web Design, Figma-to-Code

Backend and Databases: Node.js, Express.js, MongoDB, MongoDB Atlas, Mongoose, RESTful API Design

State and Data Fetching: Redux Toolkit, RTK Query, TanStack Query (React Query), Context API, API Caching, Pagination, Filtering and Search

Performance: Memoization, Code Splitting, Lazy Loading, Virtualization, Debouncing and Throttling, Skeleton Loading, Custom Hooks

Auth and Security: JWT Authentication, bcrypt, Role-Based Access Control (RBAC), Protected Routes, Helmet, CORS, Rate Limiting

Integrations and AI: Stripe (Checkout), Google Gemini API, Cloudinary, Resend API, Brevo, EmailJS, Recharts

Tools: Git, GitHub, Vercel, Postman, VS Code, Figma

PROFESSIONAL EXPERIENCE

Full Stack Developer (MERN), Freelance | Self-employed, Remote | *Nov 2025 – Present*

- Built and deployed four full-stack products on Vercel, from database design to UI (see Projects).
- Building the backend of a travel-planning platform with Node.js, Express and MongoDB Atlas: JWT authentication with bcrypt, Mongoose schemas for User, Trip, Itinerary, Destination and Activity, a seed script that moved static destination data into MongoDB, and a Destinations API.
- Agreed REST API contracts with the frontend developer; currently implementing role-based access control (Traveler, Seller, Admin), Trip CRUD and itinerary management.
- Built a MERN expense tracker with JWT auth, Redux Toolkit and a Recharts analytics dashboard.

Junior MERN Stack Developer (Contract) | Sprouto Group, Lahore (On-site) | *May 2026 – Jun 2026*

- Implemented transactional emails with the Resend API on the Node.js/Express backend and connected them to the React.js frontend.
- Fixed the protected route setup so unauthorized users are blocked correctly.
- Reduced bundle size with code splitting and refactored components for reuse.
- Participated in code reviews, giving and receiving feedback.

Associate Frontend Developer | Deutics Global (Camzify), Lahore (On-site) | *Oct 2024 – Oct 2025*

- Owned 20+ React.js components that remain live in production.
- Profiled the application and removed unnecessary re-renders with memoization and improved hook patterns, cutting them by about 40%.
- Integrated 15+ REST APIs with RTK Query and TanStack Query, adding caching, pagination, filtering, search, skeleton loading, and empty and error states.
- Delivered three role-based interfaces (Admin, Sub-Admin, User) from Figma designs for an AI-powered surveillance platform, including a dashboard with real-time notifications and heat-map visualizations.
- Worked with backend and product teams through sprint planning and code reviews.

React.js Intern, then Development Trainee | Deutics Global (Camzify), Lahore (On-site) | *May 2024 – Oct 2024*

- Built client-facing features and integrated live APIs from the first week.
- Learned Redux Toolkit and RTK Query on production tasks; retained after the internship and promoted to Associate Frontend Developer within 5 months.

Junior React.js Developer (Contract) | ZNZ Technologies, Lahore (On-site) | *Jan 2024 – Mar 2024*

- Built reusable React.js components for an e-learning platform with gig creation, likes, comments and real-time chat.
- Converted Figma designs into responsive interfaces and integrated REST APIs for dynamic data.

React Developer | Vvork Cloud Technologies, Lahore | *Feb 2022 – Oct 2022*

- Built frontend features with React.js and Bootstrap.

PROJECTS

GreenCart: Grocery Delivery Platform (MERN) | React 19, Vite, Node.js, Express 5, MongoDB, Mongoose, Stripe, TanStack Query, Tailwind CSS v4, Cloudinary

Live: mern-grocery-delivery-platform-ooo5.vercel.app

- Built three separately deployed apps on Vercel: customer storefront, admin dashboard and REST API.
- Implemented JWT authentication with email OTP (Brevo), password reset, protected routes and cross-tab session sync.
- Integrated Cash on Delivery and Stripe Checkout with idempotent payment verification to prevent duplicate orders.
- Added TanStack Query caching with targeted invalidation after mutations, so revisited pages load instantly from cache.
- Built an admin dashboard with revenue and order stats, search, status filters, pagination, enforced order-status transitions, and product and category CRUD with Cloudinary uploads.
- Added real-time order notifications for admins, stored in MongoDB with an unread count, mark-as-read and delete.
- Solved production issues: stale API responses on Vercel, uploads on a read-only filesystem, and safe re-runnable seed scripts with dry-run mode.

ShopNow: Full-Stack E-Commerce Platform (MERN) | React 18, Vite, Node.js, Express.js, MongoDB, JWT, React Query, Tailwind CSS, Framer Motion

Live: shop-now-client-iota.vercel.app

- Built a full-stack e-commerce app from scratch with product search and filtering, cart, wishlist and a star-rating review system.
- Implemented JWT authentication with bcryptjs password hashing, and secured the API with Helmet headers, CORS and rate limiting.
- Added real-time chat between customers and admins with message history, read/unread status and 500ms throttled sending.
- Built an admin dashboard with full CRUD for products, orders and users, plus order tracking.
- Reduced API calls with 400ms debounced search; improved resilience with error boundaries, lazy loading and React Query data fetching.

AI Customer Support Chatbot: Multi-Tenant SaaS | Next.js (App Router), TypeScript, Tailwind CSS, MongoDB, Google Gemini API, Scalekit

Live: ai-customer-support-b4dw.vercel.app

- Built an embeddable chatbot widget that any website can install with a single script tag, similar to Intercom and Tidio.
- Designed multi-tenant architecture with multi-organization login, so each organization has its own workspace and data.
- Generated answers with the Gemini API from each connected application's own information; stored chat history in MongoDB.

The Digital Invites: Animated Wedding Invitation Platform | Next.js 16, React 19, TypeScript, Tailwind CSS 4

Live: thedigitalinvites.com

- Launched a product on its own domain that replaces printed cards with a shareable WhatsApp link: 20+ animated designs for Wedding, Nikah, Mehndi, Walima and Engagement.
- Built English and Urdu support with one-tap RTL switching using logical CSS, plus live countdowns, scratch-to-reveal dates, Google Maps directions and background music.
- Fixed hydration mismatches with client-only countdowns, used dvh units for mobile viewports, and modeled each invitation as typed data with CSS-variable themes so a new couple needs only a data change.
- Added SEO: metadata, canonical URLs and Open Graph previews. Built with only three runtime dependencies and no animation libraries.

EDUCATION AND CERTIFICATION

- Intermediate (FSc Pre-Engineering), Superior College, Lahore
- MERN Stack Developer Certificate, Vvork Cloud Technologies, Lahore (2022)
- Frontend Development Internship Program, Deutics Global (2024)

LANGUAGES

English (Professional), Urdu (Native)
